Description

Our New Report Shows You How this Sector Will Expand its Revenues and Influence, Highlighting the Opportunities from 2009 Onwards

The market for clinical trials has been expanding rapidly in recent years, with impressive revenue growth and important trends. One regional market expanded by 65% in 2008. From the perspectives of various pharma stakeholders, the expanding clinical research market represents opportunities for revenue growth and cost savings.

Our latest report - Clinical Trials: World Market 2009-2024 - considers perspectives of pharma companies and CROs in particular. We comprehensively analyse the market's strengths, weaknesses and revenue trends from 2009 to 2024.

This report provides hard-to-find data on the current and future value of clinical trials markets, both worldwide and regionally. Importantly, this report covers emerging markets, highlighting salient trends there. Our report addresses regional questions. For example, how will India's market share change between now and 2024? Will the Central and Eastern European market expand more quickly than the market in China? We also address global questions, such as: what proportion of the sector will be controlled by contract research organisations in the future? CROs are playing increasingly important roles in drug development worldwide, from conducting phase I trials to post-marketing studies.

Clinical Trials: World Market 2009-2024 is now in its third edition. This 2009 edition is re-written, with all-new analyses. It takes into account the changed economic environment, as well as developments in policy, technology and the market.

Comprehensive analysis of the clinical trials market

Clinical Trials: World Market 2009-2024 examines that sector critically, through a comprehensive review of information sources, both primary and secondary.
